## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8 and 27-28, drawn to an anti-phosphatidyl serine antibody and compositions comprising such and kits comprising such, classified in class 530, subclass 387.1.
  - II. Claims 9-16, drawn to a method of treating a neoplastic disorder by administering an anti-phosphatidyl serine antibody to a mammal, classified in class 424, subclass 139.1.
  - III. Claims 17-24, drawn to a method of inhibiting angiogenesis by administering an anti-phosphatidyl serine antibody to a mammal, classified in class 424, subclass 139.1.
  - IV. Claims 25-26, drawn to a method of detecting PS positive tumors, classified in class 435, subclass 7.1.

2. The inventions are distinct, each from the other because of the following reasons:

The methods of Inventions II-IV differ in the method objectives, method steps and parameters and in the reagents used. Invention II recites a method of treating a neoplastic disorder by administering an anti-phosphatidyl serine antibody to a mammal; Invention III recites a method of inhibiting angiogenesis by administering an anti-phosphatidyl serine antibody to a mammal and Invention IV recites a method of detecting PS positive tumors. The examination of all groups would require different

searches in the U.S. PATENT shoes and the scientific literature and would require the consideration of different patentability issues. Thus Inventions II-IV are separate and distinct in having different method objectives, method steps and parameters and are patentably distinct.

Inventions I and II-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the antibody of Group I can be used in any of the materially different methods of Groups II-IV.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and different classifications, restriction for examination purposes as indicated is proper.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Larry R. Helms, Ph.D, whose telephone number is (703) 306-5879. The examiner can normally be reached on Monday through Friday from 7:00 am to 4:30 pm, with alternate Fridays off. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anthony Caputa, can be reached on (703) 308-3995. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0196.
